 - ◆ Research of new technology and share with team

Personal Project(Source code and Demos available on <https://github.com/UFreedom>)

[FloatingView](#) **Star: 1170 Fork: 170** **Open source library making any view with floating animation.** Easy to use and can quickly achieve a beautiful thumb up effect and so on. More than 500 stars in one week and recommended by androidweekly.cn, gank.io and other technical sites recommended.

[FloatingText](#) **Star: 621 Fork: 105** **Open source library making text with floating animation**

[X-Alarm](#) Easy-to-use alarm clock application. The main feature is to provide users with interesting alarm unlock ways to help users to get up. The project is launched by me and I'm also in charge of project management. I'm mainly responsible for creating app framework and implementation UI animations. Already published in the market.

[GradleUserGuide](#) **Star: 777 Fork: 209** Translation of "Gradle User Guide" in Chinese. Now published on jiekexueyuan.com and [Git Book](#).

EDUCATION AND INTERESTS

- 2011-2015 enrolled in Tianjin University of Technology and Education, major in software engineering, bachelor's degree
- Passion for programming and open source projects.
- Hobbies: travel, football and competitive video games
